

Cooking Essentials E-commerce Site - Planning Report

1. Project Overview

Project Name: Cooking Essentials

Purpose: Provide users with a visually appealing, user-friendly platform to browse, add to cart, and purchase cooking tools.

Target Audience: Home cooks, professional chefs, kitchen enthusiasts.

Platform: Web (desktop & mobile-friendly)

Deployment: Static site / Vercel

2. Core Features

- Homepage: Hero section, featured products, shop now button
- Product Listing: Grid display of all products with image, name, price, add-to-cart button
- Cart Page: View cart items, increase/decrease quantity, remove items, checkout
- Login/Signup: Create account, login to save user info locally
- Admin Page: Add/edit products (optional, localStorage based)
- Navigation Bar: Links to Home, Cart, Login/Signup
- Footer: Copyright, privacy policy

3. Pages and Structure

- index.html: Hero, Product Grid, Add to Cart buttons
- cart.html: Cart table with images, quantity controls, total, checkout button
- login.html: Email/password fields, login button, link to signup
- signup.html: Name/email/password fields, signup button, link to login
- admin.html: Add/edit/delete products (if implemented)

4. Product Details

- Chef Knife - \$50 - chefknife.png
- Non-stick Pan - \$40 - nonstick.png
- Measuring Cups - \$15 - mug.png
- Mixing Bowls - \$30 - bowl.png

5. User Interaction & Local Storage

- Cart Data: Save items, quantities in localStorage
- User Info: Store logged-in user in localStorage
- Cart Functionality: Add, remove, adjust quantity, display total
- Login/Signup: Validate input, alert for invalid/duplicate emails, redirect after login/signup

6. Design / UI Notes

- Color Scheme: Primary #ff6b3c, Secondary #ffe4d6, Background #f9f9f9
- Typography: 'Segoe UI', sans-serif
- Buttons: Rounded, hover effect, consistent color
- Layout: Grid for products, responsive for mobile
- Images: Use consistent size & style

- Navigation: Sticky header, login/logout links

7. Technical Notes

- HTML/CSS/JS: Core technologies, no backend required for now
- Product Images: Local folder, referenced in index.html and cart.html
- Deployment: Vercel (Static site preset)
- Optional Enhancements: Admin page, form validation improvements, persistence for login

8. Development Workflow

1. Create HTML pages: index.html, cart.html, login.html, signup.html.
2. Add CSS styling (inline or separate style.css).
3. Add JavaScript for product rendering, cart, login/signup, navbar.
4. Test locally with localhost using Node.js if needed.
5. Store images in a folder named 'images'.
6. Check responsiveness for mobile and desktop.
7. Deploy to Vercel.

9. Notes & Improvements

- Keep product and cart data in sync between pages.
- Ensure image filenames match references.
- Alert users for cart actions (add/remove/checkout).
- Consider improving UI/UX with animations or modals.
